## **Introducing Confer Net - Affordability and VoIP Compatibility: The Perfect Match!**

**Richardson, Texas September 14, 2006 – Introducing Confer Net: Affordability and VoIP Compatibility**

While many manufacturers talk about “Mean Time Between Failures” (MTBF) measured in months, the teleconferencing systems that Forum Communications developed in the 1980’s and early 1990’s have lasted 10, 12, 15 years, even longer.

No other technology can brag about that kind of durability. Today, the stable Confer platform offers you even more features, greater versatility and a lower per-port-price. The Forum Confer Net is an economical Voice over IP conference server that connects over 10Base-T Ethernet via Session Initiated Protocol (SIP).

Forum Communications, a long-time leader in the teleconferencing industry, makes the Confer Net a full-featured solution with conference scheduling, email notifications, meet-me conferences, automatic dial-out to participants, as well as user-friendly administration and a web-based conference creation wizard.

Voice over Internet Protocol technology works with packet-based networks and soft switch/media gateways, providing tremendous savings, enhanced productivity and a vehicle for rapid system enhancements.

Confer Net appeals to companies that are implementing VOIP, and fits equally well in a legacy telecom environment (using VoIP gateway) or IP/PSTN hybrid network, allowing voice conferencing of up to 25 participants in simultaneous calls.

### **About Forum Communications**

Forum Communications has been at the forefront in Conference Server design with a 17 Year Commitment to design quality and customer satisfaction, with over 100,000 ports in service for Business, Federal, State and Local Governments, and DoD installations around the Globe.
